Various antique cement tile designs resemble French limestone, diamond-shaped tiles have a ceramic-like appearance, and fan-shaped Moroccan tiles are also made from ceramic material. These tiles feature a slightly glossy surface with a reddish hue, making them suitable for flooring in kitchens. Their retro style gives off a fashionable vibe. The 3D flower pattern on some of these ceramic tiles adds to their decorative value, while the porcelain tile's hexagonal shape and orange tint make it perfect for use as decorative elements on walls and ceilings. With the Substance SBSAR file, users can manipulate various aspects such as tile color, grout color, edge wear, bevel, surface finishing, dirt color, and amount of dirt to achieve the desired look. These white ceramic tiles in a basketweave pattern offer flexibility with colors and texture through the Substance SBSAR file. The same file also allows control over triangle-shaped ceramic tiles' appearance by adjusting tile color, grout color, tile height, surface roughness, paint overflow amount, edge wear, and edge fading effect. Geometric rhombus-style ceramic tiles arranged in sets of three create a virtual cube, while the Substance SBSAR file enables users to set various parameters such as tile color, tile position random, grout color, cement height, and edge wear. A variant of traditional black and white checker tiles boasts a brownish color combination that lends it a nostalgic feel, with all its characteristics fully customizable through the Substance Designer SBSAR file. Square ceramic tiles with a semi-reflective surface are both modern and elegant, allowing for adjustments to their color combination, grout color, position random, grout width, edge wear level, and amount of dents and scratches via the Substance 3D SBSAR file. These tiles are particularly well-suited for classic black and white flooring designs. Lastly, greenish-blue ceramic tiles with vertical arrangements can be entirely customized using the Substance 3D SBSAR file, including colors of tiles and grout, level of color variation, surface roughness, position random, paint overflow amount, edge wear, dents, and scratches. These elongated diamond-shaped ceramic tiles have a shiny surface, resembling those found in high-end buildings. The Substance 3D SBSAR file allows users to tweak various factors such as tile color, grout color, and level of color variation, giving designers immense control over the final appearance. Furthermore, this type of tile can mimic the look of fish scales or terrazzo due to its unique shape and texture. When used for roofing purposes, the SBSAR file enables manipulation of elements like lichen growth, bird droppings, and dirt accumulation, allowing creators to achieve a more realistic and aged look. This collection of 3D assets is made available by ambientCG, a popular platform offering free PBR materials, HDRIs, and models for various industries including architecture, game development, and visual effects. With over 1 million monthly downloads, it serves as a valuable resource for artists, students, and educators worldwide. The website's founder created the platform in response to restrictive licensing policies of other texturing platforms, making all assets freely shareable under the Creative Commons CC0 license. This allows users to utilize the materials without attribution, even in commercial projects. If you're looking to support this project, consider becoming a patron on Patreon or buying a coffee on Ko-fi. Patrons can enjoy perks like ad-free browsing and early access, as well as contribute texture suggestions. However, please note that there's no guarantee of concrete promises, and contract work is not currently offered.
